

Gambro

polyflux 2h & 6h

A TREATMENT CHOICE FOR LOW BODY WEIGHT PATIENTS

The Gambro POLYFLUX 2H & 6H dialyzers provide high flux dialysis treatment to low body weight patients, typically children.^{1,2,3} The POLYAMIX membrane can deliver effective high flux performance suited to this patient group.^{2,3} Small blood compartments in the dialyzer are designed to promote simple and easy priming.²

TWO SIZES, 2H & 6H, FOR DIFFERING SMALL PATIENT SIZES

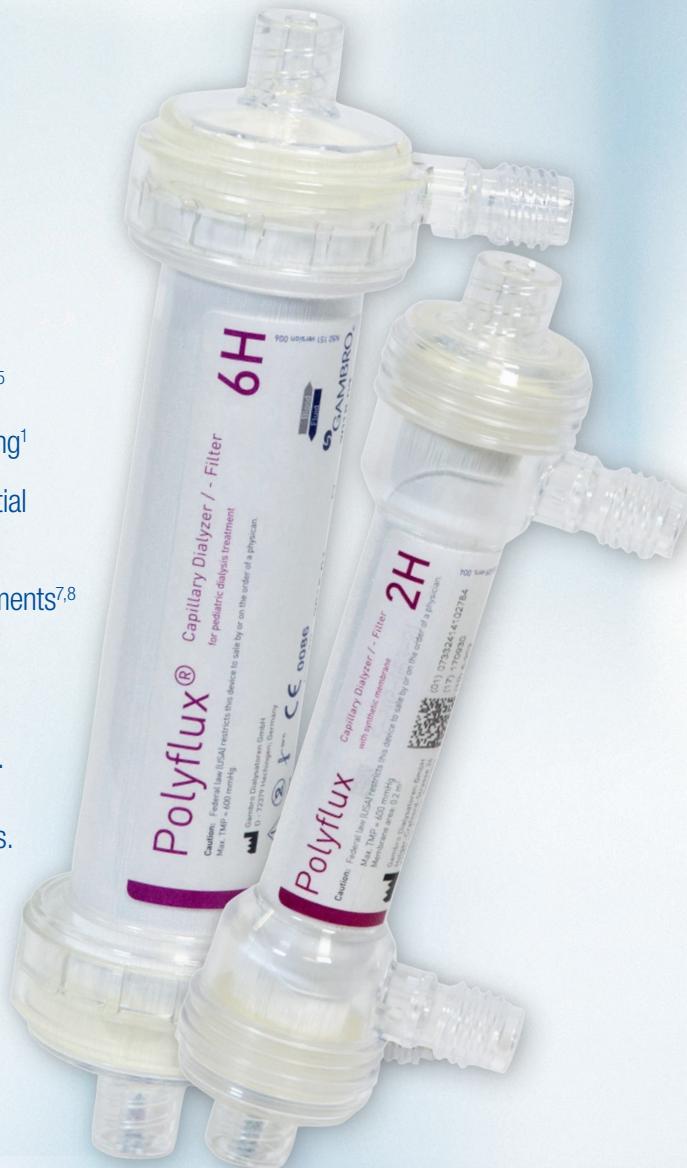

- Blood compartment priming volume of 17 ml and 52 ml, respectively^{2,3}
- Suitable for low body weight patients, typically children^{1,2,3}

A FOCUS ON THE PATIENT:

- Promotes endotoxin retention within the dialyzer membrane^{1,4,5}
- Membrane structure designed to help reduce the risk of clotting¹
- Steam sterilized, which eliminates exposing patients to potential EtO residuals⁶
- Suitable for use in both high flux dialysis and convective treatments^{7,8}

The Polyflux 2 H is indicated for treatment of chronic and acute renal failure by hemodialysis, hemodiafiltration and hemofiltration. In consideration of extracorporeal blood volume, blood flow and body weight, the Polyflux 2 H can be used for low weight patients.

Polyflux 6 H is intended for chronic and acute applications in hemodialysis, hemodiafiltration and hemofiltration on small patients including pediatric indications, considering blood flow, body weight and extracorporeal blood volume.

**TYPICAL PATIENT PROFILE:
LOW BODY WEIGHT PATIENTS, TYPICALLY CHILDREN**

Gambro POLYFLUX 2H & 6H Dialyzers

PERFORMANCES IN VITRO

Measured according to ISO 8637

CLEARANCE IN VITRO (ml/min) ± 10%		POLYFLUX 2H $Q_b=30 \text{ ML/MIN}$			POLYFLUX 2H $Q_b=300 \text{ ML/MIN}$			POLYFLUX 2H $Q_b=500 \text{ ML/MIN}$			POLYFLUX 6H $Q_b=500 \text{ ML/MIN}$			
Hemodialysis		20	60	100	20	60	100	20	60	100	50	100	150	200
